

“Towards Flood Disasters Reduction ”
- Enlarged IFNet General meeting -

Floods occur every year in many parts of the world claiming human lives and causing property damages on a large scale.

Flood disasters seem to point to an upward tendency contrary to our expectations.

In recent years socio-economic development and diverse ways of life have been growing, which means that once a flood has caused damages in some areas, it will take a time and a large amount of energy for them to restore their previous levels of socio-economic activities.

The International Flood Network(IFNet)aims to promote international sharing of knowledge, technology and information related to flood countermeasures, and international cooperation in flood management.

At IFNet we solicit, collect, and disseminate information on floods from a wide range of sources.

IFNet is an open network. Anyone who agrees with its objectives can join.

Please participate in our Enlarged General Meeting and share your region's information, experiences and knowledge on floods with the world!

Venue : Social Welfare Hall, Beppu-City

Date : 1 December 2007, Saturday 13:30-18:00
